

# Pressure vs. Decibels

**Zoom  
x100**

Due to the immense scale necessary to chart the pressure change between 100dB and 194dB we have created a magnified window to display from 100dB to 150dB. In this window we can see that pressure continues to rise exponentially as the decibel level increases. The relationship and shape of the graph is the same in both windows, only the units of measurement have changed.
